E X O T I C

Vryburgia brevicruris

Short-Legged Mealybug

Field Recognition

Small mealybugs (2-3 mm long), red to purple. Lacking side (lateral) wax filaments. Two thick wax filaments arising from tip of abdomen.

Known Southeastern Distribution

Not established in Southeastern region, but established in Arizona and California.

Common Hosts

Commonly intercepted on bulb plants (lily bulb mealybug) and jade plants (short-legged mealybug).
